

ECLIPSE

SOIL CONDITIONER

PRODUCT CODE - ESSC

FAST FACTS

- ← Enriched with high levels of quality composted mulch fines to increase soil carbon levels
- ← Reduces irrigation demand while also improving plant growth

PRODUCT SPECIFICATIONS

- ← 25% organic matter (by weight)
- ← 10mm/min wettability
- ← AS4454 Compliant

APPLICATION

- ← Blend with soil to boost organic matter content of soil and improve water holding capacity

HOW TO USE

1. Blend AS4454 Compliant Soil Conditioner at a ratio of **one part conditioner to one part soil** and mix to minimum 300mm, deeper for larger plants.
2. Add a good quality slow release fertilizer.
3. Water in well.

PRODUCT OVERVIEW

Water conservation is the key performance attribute of the Eclipse Soils product range. Eclipse Soils products have been formulated to reduce the amount of water required to support and maintain healthy plant growth.

Eclipse Soils' AS4454 compliant Soil Conditioner is added to soil to improve structure and plant growth. Soil Conditioner contains high levels of quality composted mulch fines and peat, which will improve the physical, biological and chemical characteristics of the soils it is applied to.

Using AS4454 Compliant Soil Conditioner will significantly improve the water and nutrient holding capacity of native sands.
