

LIGHTWEIGHT ROOFTOP GARDEN SOIL

FAST FACTS

- Manufactured using a range of lightweight materials that do not degrade and breakdown
- Lighter – significantly lower saturated bulk density compared to standard soil blends
- Good drainage
- Resists soil slumping
- No requirement for washed river sand base
- Economic advantages due to no requirement for foam packing of planters

PRODUCT SPECIFICATIONS

Saturated bulk density	1.2 - 1.4kg/L
Organic matter	7 - 15% by dry weight
Permeability	50 - 150cm/hour
Plant available water	12 - 18%

APPLICATION

Suitable for all rooftop garden and planter box applications where:

- Lower saturated soil weight is required
- Good drainage rates are required
- Soil must resist slumping and maintain structure

HOW TO USE

1. Apply to a suitable planting depth, depending on the plant size and expected rooting depth.
2. Do not compact.
3. Larger shrubs or trees may need to be supported initially.
4. Add a good quality slow release fertiliser.
5. Water in well – the soil will need several small initial watering to wet up fully.
6. Cover with quality composted mulch, such as Aquamor™ Mulch or Boutique Mulch
7. Suitable for blowing into difficult hard to access areas.
