

# ROOT ZONE MIX

## FOR USE ON OVALS AND PLAYING SURFACES

PRODUCT CODE - ESRZM

### FAST FACTS

- ← Ideal for use on turf areas including ovals and active Public Open Space (POS).
- ← Drains effectively while providing an ideal turf growing media.

### PRODUCT SPECIFICATIONS

- ← Meets Australian Standard AS 4419.
- ← Particle size distribution: less than 5% passing 75 micron.
- ← Soil texture: medium to coarse sand.
- ← Organic matter content (by dry weight): 3% (+/- 1%).

### APPLICATION

- ← Use to construct minimum 300mm finished depth of active playing surface.

### HOW TO USE

1. Prepare subsurface greater than 300mm depth according to civil construction specifications. Ensure the finished surface is free of stones and roots and provides a smooth, de-compacted surface. Avoid a finished sub-surface that will result in a sharp soil type contrast to the imported RZM. This will cause a capillary break and potentially impede drainage.
2. Import and spread root zone mix, containing homogeneous blend of 3% (dry Weight) organic matter.
3. Add 300mm root zone mix taking care to avoid tracking machinery over already spread material which will cause differential compaction.
4. Evenly compact to achieve target drainage.
